## Forehead Temperature Indicators for Anesthesia and PACU

A fast, simple temperature monitoring system based on proprietary color change technology.

Liquid crystals are chemical compounds and mixtures that exhibit the mechanical properties of liquids and the optical characteristics of solids.

Liquid crystals that change color with changes in temperature are known as Thermochromic Liquid Crystals (TLCs). Scientifically they are identified as Cholesteric Liquid Crystals. Micro-encapsulation is the process that primarily protects, stabilizes and makes the liquid easier to use.

FeverScan® products utilize this exciting technology (TLCs) for the measurement of clinical temperature trends in the health-care environment.

FeverScan® thermometers are composed of a series of discrete temperature events, each event shows a green color as the indicated temperature is attained.

The color changes from tan to green to blue as the temperature increases. References are available upon request.

### Continuous Display

- Forehead Temperature Monitor
- Monitor Trend During Transport
- Watch for Hypo/Hyperthermia
- Pre and Post-Op Surveillance
- Hospital and Home Use
- Disposable, Reusable, Latex-Free
- Core Adjusted Temperature

Actual Size

### Disposable

Anesthesia & PACU Dual Scale	
<b>Item #</b>	<b>P492</b>
<b>Description</b>	Disposable-Dual Scale (with adhesive backing) 100 thermometers per dispenser
<b>°F or °C</b>	°F & °C
<b>Range</b>	94°F - 105°F and 34°C - 41°C
<b>Case</b>	1

### Reusable

Hospital/Home

### To Read:

1. Remove backing liner and apply monitor to the center of forehead, just above the eyebrows. Skin surface should be clean and dry.
2. Read monitor when the boxes stop changing color (generally 15 seconds) and while it is still on the forehead.
3. Green indicates the correct temperature; if green does not appear, the temperature is between blue and tan.

Please see IFU047 for complete instructions for use.
